USER INTERFACE FOR A
COMPLEX ORDER PROCESSING SYSTEM

5

Abstract

A user interface for a computerized complex order processing system presents
a list of products and services associated with an account, a list of quotes associated
10   with the account, a list of orders associated with the account, and several user-
selectable options. The options allow the user to transfer a service profile by
defaulting the existing services at an old location to a new location; add, modify, and
disconnect products and services the service profile, quotes, and orders associated
with a selected account. The options further allow the user to accept a quote, convert
15   the quote to a sales order, update the amount of revenue to be generated by a quote,
approve an order, and submit the order for provisioning
